EDUCATION

VIA University College
Software Technology Engineering

Horsens, Denmark
2025 – 2029

OBJECTIVE

Software Technology Engineering student at VIA University College seeking a developer role where I can apply hands-on full-stack experience to build reliable, well-architected systems. Looking to take ownership of end-to-end projects, from design through deployment, while growing in system architecture and production-quality engineering.

EXPERIENCE

Full-Stack Developer

Folkaet

Mar 2026 – Present
Copenhagen, Denmark

- Built and shipped the Work-Pairs marketing website using Astro, Tailwind CSS v4, and daisyUI v5, delivering responsive layouts with custom typography and Lottie animations.
- Designed end-to-end form submission infrastructure using Astro API routes and Resend, handling contact inquiries and candidate submissions in production.
- Built a client intake questionnaire feature and a privacy policy page on the main Folkaet website using React, extending the frontend with new user-facing functionality.

PROJECTS

Village Management System — Backend Developer (University Project) | Java, JavaFX, HTML, CSS, JavaScript Sep 2025 – Dec 2025

- Developed the backend for a village management system in Java, covering API design, data modeling, and database integration to support cross-team collaboration with the frontend group.

Restaurant Management Platform — Java Server Application (University Project) | Java, PostgreSQL

Jan 2026 – May 2026

- Built a server-based restaurant management platform in Java allowing waiters to manage table assignments, food orders, and reservations, applying MVVM architecture, Observer and State design patterns, and multithreading for real-time concurrent operations.

SOLUTEC Project Management System - Fullstack (University Project) | Spring Boot, PostgreSQL, React, .NET Sep 2026 – Present

- Building a centralized project management platform for SOLUTEC's aluminum carpentry operations using Spring Boot, PostgreSQL, and .NET, with role-based access, Kanban workflows, task dependencies, and automated notifications across administration, manufacturing, and installation teams.

Bank Account Tracker | Spring Boot, Tink API, PostgreSQL, Python, PyTorch

Jul 2026 – Present

- Built a personal finance app with a Spring Boot backend, OAuth-connected Tink open banking API, and PostgreSQL persistence.
- Added a PyTorch-based transaction categorizer that classifies expenses locally and automatically, with no manual labeling required.

Forum App | .NET, SQLite, Blazor

Sep 2026 – Present

- Building a modular forum app using .NET Web API, Entity Framework Core, and Blazor, with a layered architecture that separates network and persistence concerns for independent feature development and easy future extension.

SKILLS

Spoken Languages: Romanian - Native, English - C1 (Cambridge Certificate), Danish - Beginner (Currently studying)

Programming Languages: HTML, CSS, JavaScript, Java, SQL, Python, C#

Frameworks: Spring Boot, React, Blazor, Astro, .NET

Developer Tools: Git, GitHub, PostgreSQL
